

INVESTMENT STRATEGY & PORTFOLIO ANALYSIS

2026 DECA ICDC
Stock Market Game Pitch
Lancaster Country Day School
725 Hamilton Rd, Lancaster, PA 17603

Portfolio Manager: Avay Bhandari
Pennsylvania DECA

ADMINISTRATIVE OVERVIEW

Fund Entity: Keystone Catalyst Capital

Portfolio Manager: Avay Bhandari

Chapter Name: Lancaster Country Day School

Chapter Address: 725 Hamilton Rd, Lancaster, PA 17603

Event: Stock Market Game (SMG)

Presentation Date: April 2026

AGENDA

I. OVERVIEW

- Project Mandate & Baseline Performance

II. PORTFOLIO PERFORMANCE

- Equity Curve & Asset Allocation

III. RATIONALE

- The S.P.A.R.K. Framework
- Event-Driven Equity Execution (CLPT, LPTH, BTQ, CCCX)
- Defensive Rotation & Diversification
- Competition Compliance & Diversification Strategy

IV. CONCLUSIONS AND FINDINGS

- Strategy Effectiveness & Future Adaptation
- Portfolio Summary

V. BIBLIOGRAPHY

- Source & Ledger Verification

VI. APPENDIX

- Trade Reference Summary

SECTION I. OVERVIEW

PROJECT MANDATE

Maximize short-term alpha while strictly managing downside risk.

CORE STRATEGY

The S.P.A.R.K. framework (detailed in Section III).

CAPITAL PRESERVATION

Rotated into fixed-income assets during mid-October VIX spike to lock in realized gains. Executed 60+ trades across 23 tickers. This presentation focuses on the four core catalyst-driven positions.

+38.18%

Starting Equity: $100,000 | Ending: $138,179
Execution Window: 10 Weeks

SECTION II. ANALYSIS OF PORTFOLIO PERFORMANCE

+38.18%

Portfolio Return

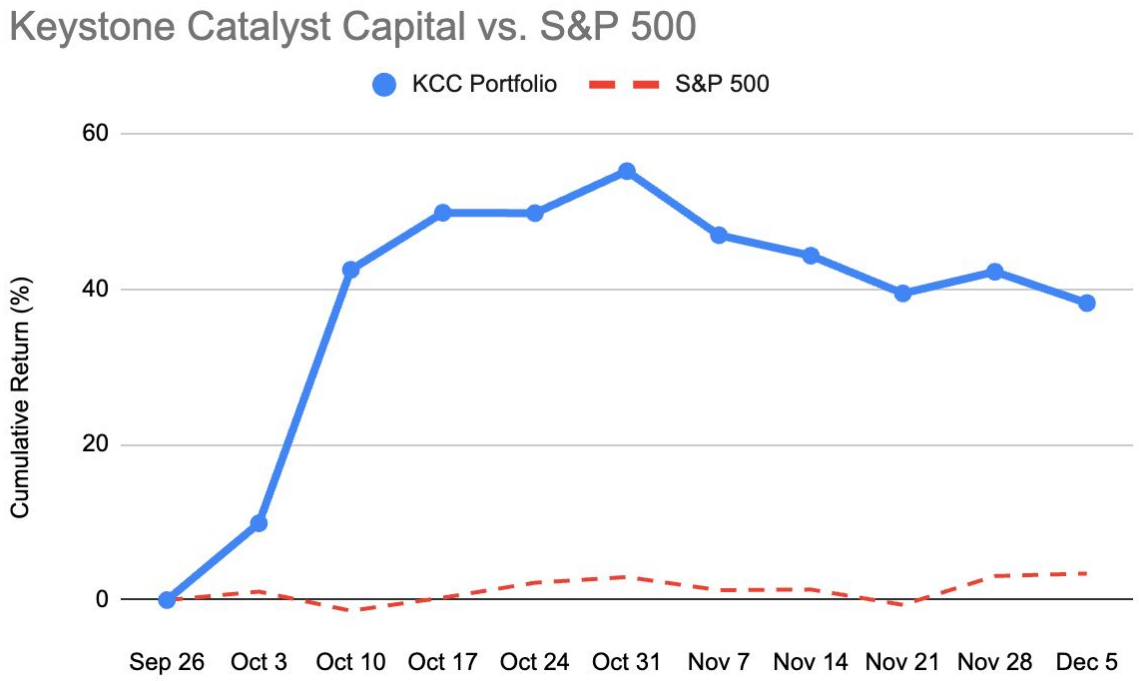

+3.41%

S&P 500 Return

66%

Terminal Risk-Off Allocation

(Majority defensive positioning at close)

SECTION III. RATIONALE: MACRO LANDSCAPE

WHY NOT BUY AND HOLD?

A 10-week window favors tactical exposure. Our capital targeted three event-driven catalysts.

Active management captured **+34.77%** alpha over passive exposure.

MACRO THEMES

Biotech Infrastructure: Device supplier (CLPT) validated by clinical data without binary drug approval exposure.

Geopolitical Shocks: Domestic optics supplier (LPTH) via Germanium export ban.

Corporate Events: Nasdaq listing (BTQ) + SPAC merger (CCCX).

SECTION III. RATIONALE: THE S.P.A.R.K. FRAMEWORK

[S] Supply Chain Dislocation
Position before the market reacts to material shortages.

[P] Pattern Recognition
Track institutional volume spikes ahead of announcements.

[A] Asymmetric Events
Target catalysts where upside heavily outweighs downside.

[R] Risk Management
Rotate into fixed-income to lock in realized gains.

[K] Kinetic Momentum
Enter only when volume confirms the thesis.

SECTION III. RATIONALE: THE CLPT CATALYST

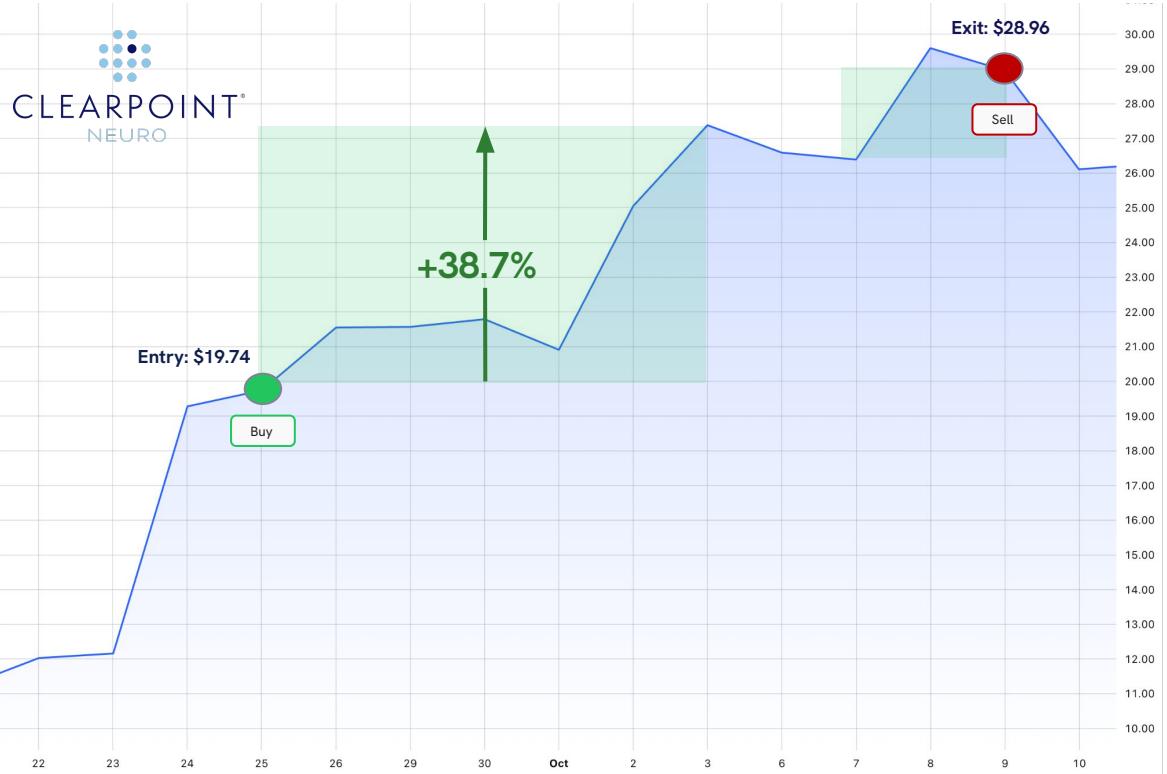

The Catalyst: uniQure clinical data validated ClearPoint Neuro's (CLPT) delivery system.

The Allocation: Target the device supplier, not the drug developer. Benefits from clinical validation without binary approval risk.

The Signal: 12.4M share volume spike on September 24 confirmed institutional interest.

	uniQure (Drug Developer)	CLPT (Device Supplier)
Risk	Binary FDA approval	Low — validated by clinical use
Upside	Tied to single drug outcome	Rises on any clinical adoption

SECTION III. RATIONALE: THE CLPT CATALYST

TACTICAL EXECUTION

Risk Management: Exited at $27.38 on Oct. 3 to secure early profit.

Strategic Re-Entry: Re-established at $26.39 on Oct. 7 as volume held above 1.5M. Final exit at $28.96 on Oct. 9.

NET RETURN + 38.7% | First Exit (8 days)

SECTION III. RATIONALE: THE LPTH CATALYST

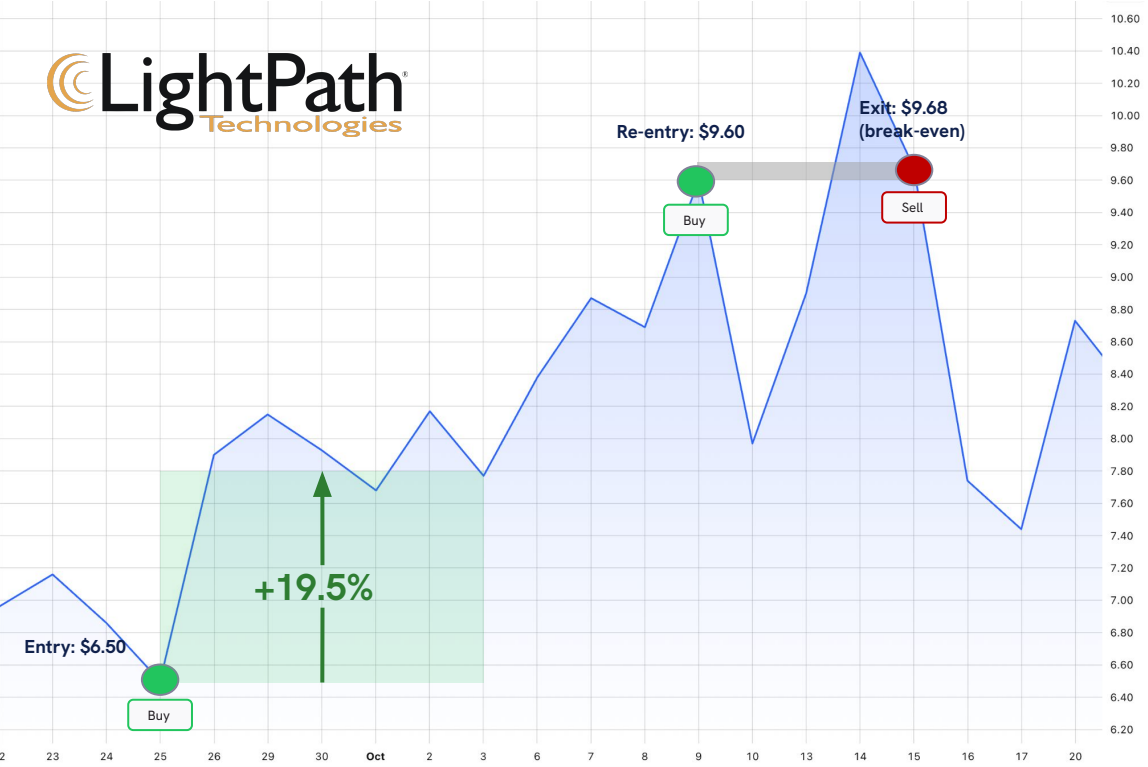

The Catalyst: China's December 2024 Germanium export ban created severe U.S. defense optics shortages.

The Allocation: LightPath Technologies (LPTH) manufactures Black Diamond optics, a direct domestic alternative.

The Signal: Q3 2025 trade friction accelerated institutional demand for localized suppliers.

	Foreign Germanium Supply	LPTH (Domestic Supplier)
Risk	Subject to export restrictions	U.S. manufactured, supply chain independent
Upside	Capped by policy reversal risk	Grows with defense reshoring regardless of policy

SECTION III. RATIONALE: THE LPTH CATALYST

TACTICAL EXECUTION

Risk Management: Exited at $7.77 on Oct. 3 to secure a **+19.5%** profit.

Strategic Re-Entry: Re-established at $9.60 on Oct. 9. Exited at $9.68 on Oct. 15 at break-even.

NET RETURN + 19.5% | Profit Secured (8 days)

SECTION III. RATIONALE: LIQUIDITY CATALYSTS

THE QUANTUM COMPUTING THESIS

In Q4 2025, quantum computing emerged as a high-liquidity sector driven by new listings and SPAC activity. KCC identified two entry points:

BTQ Technologies (BTQ): Recent Nasdaq listing with minimal analyst coverage. Captured early accumulation before institutional attention.

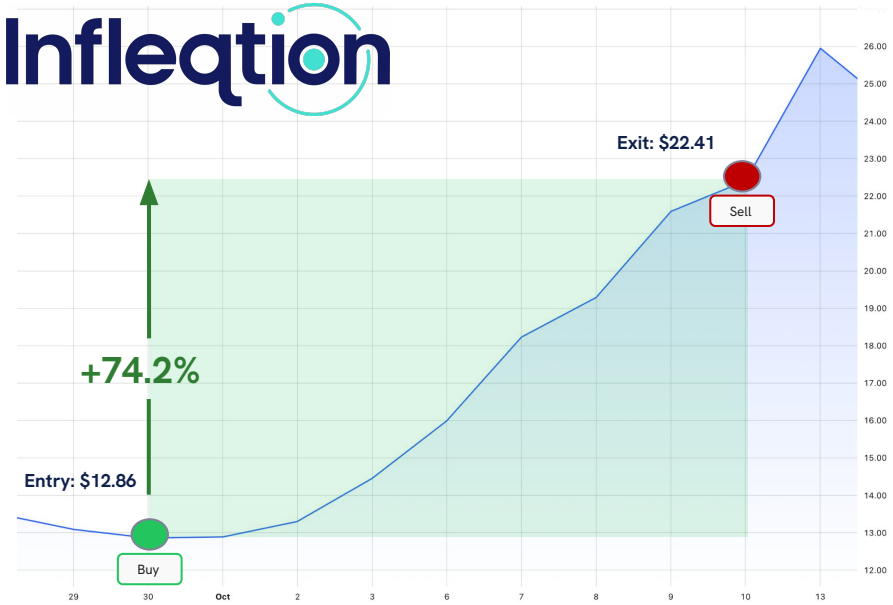

Churchill Capital (CCCX): Blank-check company merging with Infleqtion (INFQ). Merger announcement drove rapid price discovery.

	BTQ	CCCX
Entry	$6.94	$12.86
Exit	$14.14	$22.41
Return	+103.7%	+74.2%
Hold	5 days	10 days

SECTION III. RATIONALE: LIQUIDITY CATALYSTS

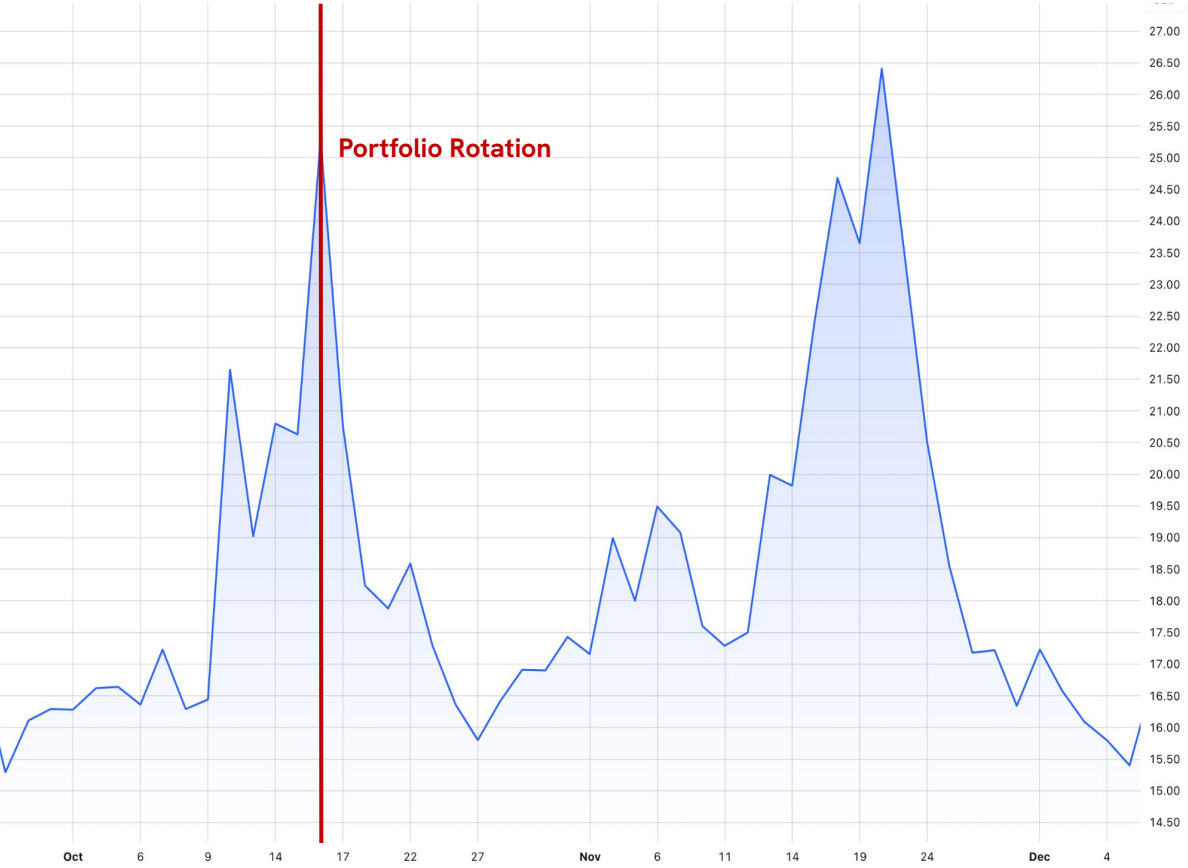

NET RETURN +103.7%
| 5 Days

NET RETURN +74.2%
| 10 Days

SECTION III. RATIONALE: DEFENSIVE ROTATION

The Trigger: VIX spiked to multi-month highs on renewed tariff escalation and government shutdown.

The Pivot: Liquidated into all high-beta equity positions on Oct. 15. Rotated into Treasury bonds and FCNVX on Oct. 16.

The Result: Rotated into Treasury bonds ($16,000) and FCNVX (Fidelity Conservative Income Bond Fund, 1,200 shares). Locked **+38.18%** return.

SECTION III. RATIONALE: COMPETITION COMPLIANCE

DIVERSIFICATION REQUIREMENT

SMG requires $10,000 minimum across stocks, mutual funds, and bonds by Oct. 24.

Stocks: NKTR (200 shares, $10,992)
Mutual Fund: FCNVX (1,200 shares)
Bonds: $16,000 Treasury allocation

LONG-TERM HOLD: NEKTAR THERAPEUTICS

Selected NKTR at $54.96 (Oct. 16) as a compliance hold. Phase 2b data readout scheduled mid-December, outside the simulation window. Upward drift from anticipation with no binary risk exposure.

SECTION IV. CONCLUSIONS & FINDINGS: LESSONS LEARNED

STRATEGIC WINS

INDIRECT POSITIONING
Buy the supplier, not the headline stock.

ONE THEME, TWO TRADES
Two entry points within one sector thesis.

EXITS ON OUR TERMS
No stop-losses triggered, no forced liquidations.

AREAS FOR REFINEMENT

RE-ENTRY WITHOUT CONFIRMATION
Re-entered closed positions without fresh volume signals to justify the trade.

CHASING MISSED MOMENTUM
Chased price after peak volume instead of waiting for confirmation.

POSITION SIZING
Secondary entries carried the same allocation as high-conviction trades.

SECTION IV. CONCLUSIONS & FINDINGS: CONCLUSION

FRAMEWORK VALIDATED, NOT PERFECTED

S.P.A.R.K. identified four profitable catalysts across three sectors in 10 weeks. The framework works. The operator needs calibration.

WHAT CHANGES NEXT CYCLE

1. Stricter re-entry rules. Closed positions require fresh volume confirmation before reopening.

2. Earlier defensive rotation. The Oct. 15 rotation preserved gains, but VIX warning signals appeared as early as week 3.

3. Smaller position sizing on secondary entries to limit downside on momentum trades past their peak.

SECTION IV. CONCLUSIONS & FINDINGS: PORTFOLIO SUMMARY

Metric	KCC
Final Value	$138,180
Total Return	**+38.18%**
S&P 500 Benchmark	+3.41%
Alpha Generated	**+34.77%**
Trades Executed	60+ across 23 tickers
Simulation Period	Sept. 25 - Dec. 5, 2025
